

ABSTRACT OF THE DISCLOSURE

A stand for installing a plurality of box bodies is capable of reducing a space needed for installing the plurality of box bodies in parallel and preventing interference with heat radiation of each box body. A stand  
5 for installing a plurality of each box bodies 81 in parallel includes a pair of outer stands 51, 51 holding the box bodies 81 disposed on the outer sides from the sides of outer surfaces of the box bodies 81, a middle  
10 stand 52 disposed between these outer stands 51, 51 and holding both of the box bodies 81, 81 adjacent to each other from the face-to-face sides thereof, and a connection mechanism detachably connecting the stands 51 52.
